

Extreme DA—The Technology Leader in IC Timing Analysis—Opens New World Headquarters in Santa Clara, California, U.S.A.

Santa Clara, Calif. — September 10, 2007 — Extreme DA™ opened new corporate headquarters here at 3211 Scott Boulevard, moving from its original offices in Palo Alto, Calif. Extreme DA is the technology leader in new-generation timing analysis for integrated circuit (IC) designs. Its new analysis product, Extreme DA GoldTime™, uniquely provides the top features designers need* to achieve timing sign-off: speed of analysis, accuracy of analysis, and awareness of process variations. GoldTime gives designers a 5X increase in speed and capacity over current-generation tools and the ability to investigate design performance variability and IC yield before committing to manufacture.

“To accommodate our growing staff, our new headquarters is five-times larger than our former offices,” said Mustafa Celik, CEO of Extreme DA. “In just one year, our staff has increased by 100 percent, and we are aggressively recruiting to add more employees to our team by year-end.”

About Extreme DA

Headquartered in Santa Clara, Calif., venture-funded Extreme DA develops and licenses software products to improve the performance and yield of nanometer integrated circuits. The company’s investors include Foundation Capital, IT-Farm Corporation, and Lanza techVentures.
